

Infants & Children

Why would a child need to see a chiropractor? Many spine and nerve system problems go unnoticed, silent, and undetected. Birth trauma, learning to walk, slips and falls, bumps, & tumbles can cause misalignments of the spine. These misalignments cause abnormal nerve flow, and can cause many of the following conditions:

- ADD/ADHD
- Allergies/Asthma
- Bedwetting
- Birth Trauma
- Breastfeeding difficulties
- Colic
- Cranial Malpositions
- Digestive Trouble
- Ear Infections
- Eczema
- Frequent Illnesses
- Headaches
- Reflux
- Sleeping Trouble

Children's Chiropractic Center has a kid-friendly, inviting, and fun atmosphere. Gentle adjustments are selected and performed based on the size and specific needs of the child. Special adjusting tools make the visits exciting, safe, and comfortable. Kids love to come to Children's Chiropractic because they know it helps their bodies work better!

Pregnancy

Mothers who get adjusted regularly during pregnancy require less interventions during birth, have decreased pain, and shorter labor times. Dr. Angell has been trained to use the Webster Technique, which uses gentle adjustments on the Mother's spine and pelvis to help the baby assume the best possible position for birth.

All adjustments are modified to fit the needs of the expectant mother, as well as the growing baby. Chiropractic adjustments are safe and comfortable during pregnancy, and provide much needed relief for these common complaints:

- Headaches
- Back Pain
- Sciatica
- Pubic Bone Pain
- Upper Back Pain
- Reflux/Indigestion
- Swelling
- Carpal Tunnel
- Fatigue

All Ages & All Conditions

Chiropractic care is enjoyed by millions of people, of all ages, and with many types of complaints. Nerve interference causes the body to malfunction. Chiropractic adjustments restore the body to its optimal function and health. You are never too young or old to enjoy the benefits of chiropractic care!

Chiropractic Can Help:

- Neck & Back Pain
- Stress & Headaches
- Poor Posture
- Jaw Pain (TMJ)
- Sports Injuries
- Carpal Tunnel
- Arthritis
- Fibromyalgia
- Digestive Trouble
- Weakened Immune System
- Sleep Disturbances
